SCIENTIFIC RESEARCH and DEVELOPMENT

< past, present, future >

Discussing

modern problems of Scientific Research and Development

there are three main aspects selected :

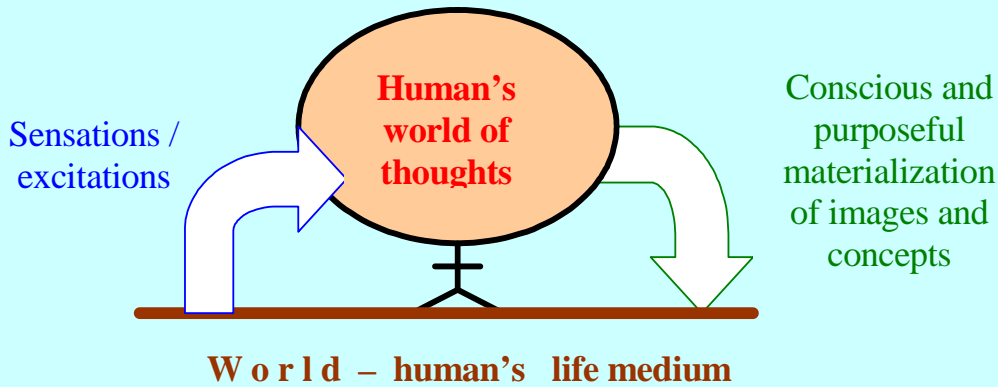

HUMAN and SCIENCE (scientific reflection of sensed world within human's world of thoughts – **scientific thinking**)

HUMAN'S LIFE and SCIENCE (scientific research and development today, unity of **fundamental and applied science**)

Some SCIENCE BASED ACTUALITIES today (scientific research and development within **modern consumers' society**)

Human – body and spirit (will, feelings, mind)

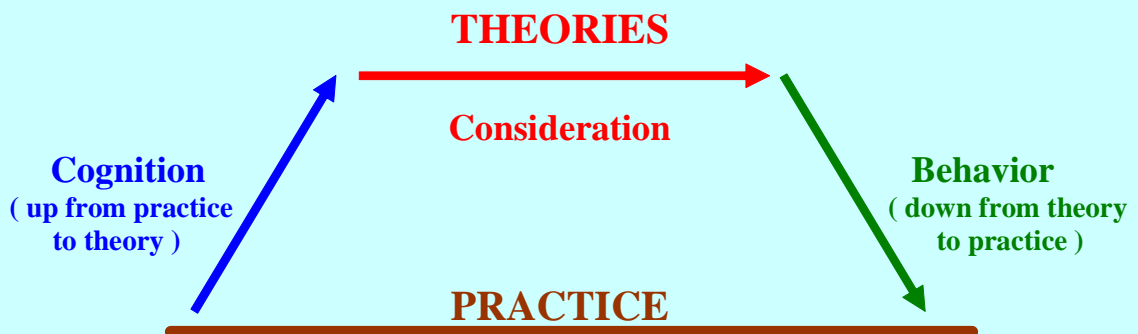

Homo sapiens conscious (artistic and scientific) reflection
of sensed world and following purposeful actions as
conscious materialization of corresponding images and concepts

Arts - images, emotional expression of thoughts - **FEELINGS**
Sciences – concepts, rational expression of thoughts - **MIND**

Thinking means building theories !

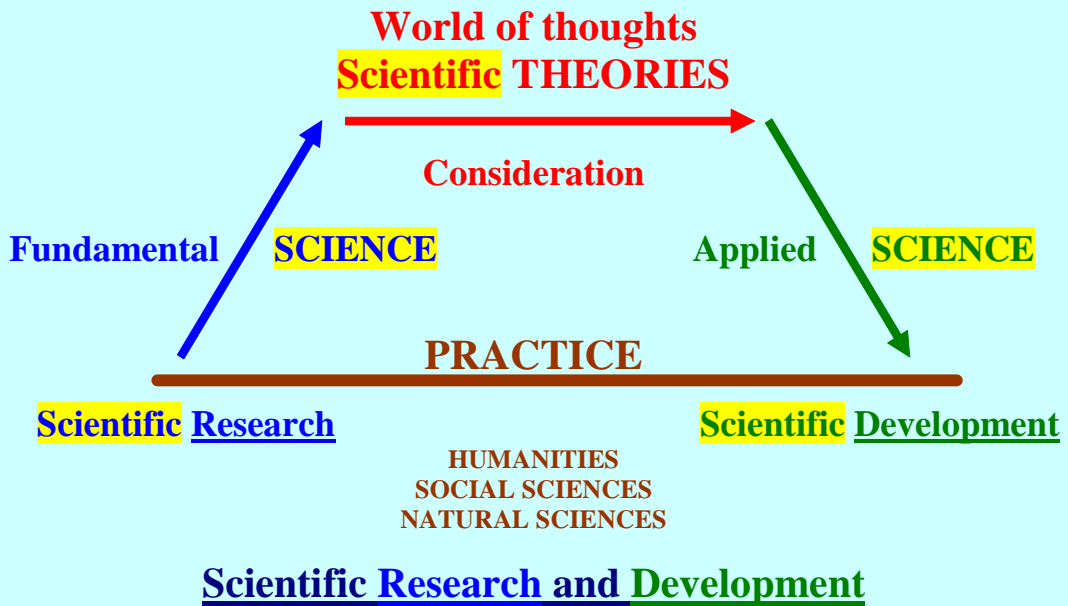

**Reflection of sensed world builds
OUR WORLD OF THOUGHTS**

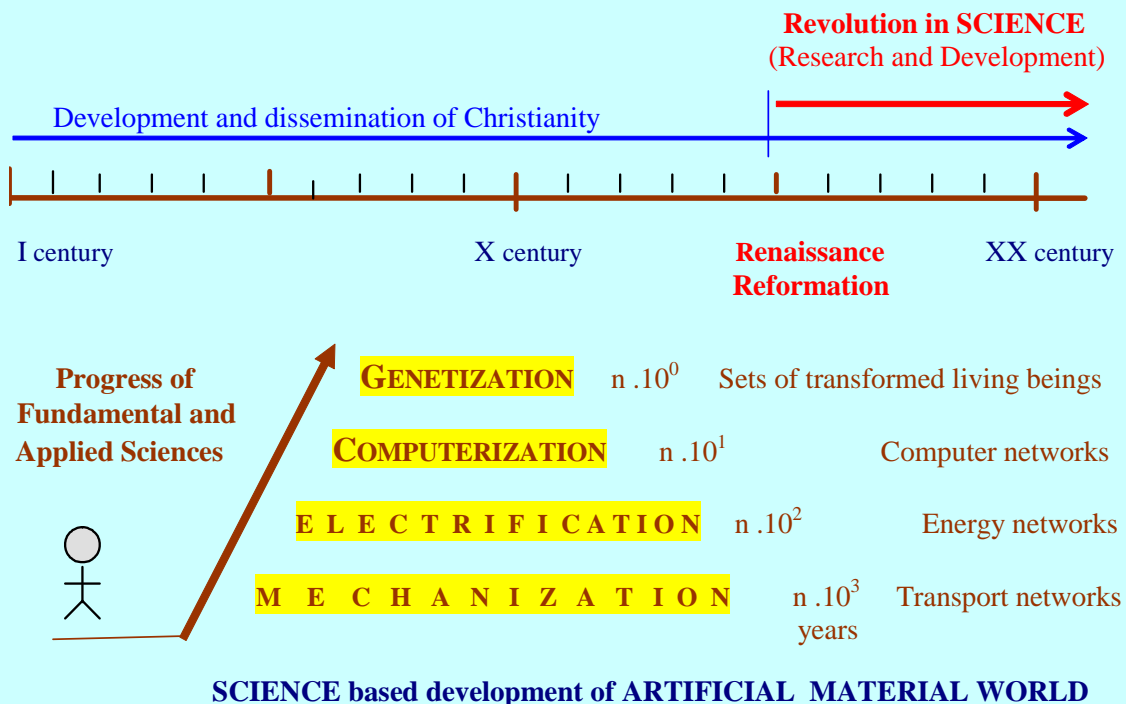

Human's spiritual life : interconnected - systemic

artistic (feelings based), **scientific** (mind based), pragmatic (will based)
thinking

Scientific Thinking :
Reality and Precision, Facts and Causes
 when reflecting sensed world within human's consciousness

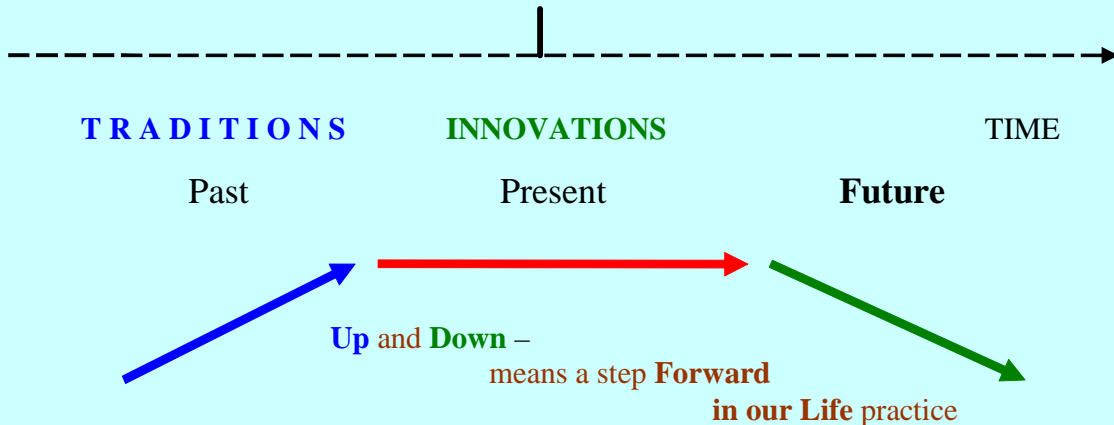

**Development of modern Western Culture and Civilization,
 our Life and Education**

Let us work for **b e t t e r** life in our future !

Let's make **better SCIENCE** for better future life!
Let's make **better PEOPLE** for their **better future LIFE!**

Thank you very much for your attention !

LIFE EXPERIENCE
(knowledge,
values,
skills)
for LIFE
(cognition,
consideration,
behavior)
